

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

PREFACE.

The books which are catalogued in this little volume have been brought together during the past four years. On entering upon the duties of Superintendent of Public Schools in Philadelphia, I felt that it would be a great advantage to have at command the best authorities on the history, science and art of education. Questions would be sure to arise in connection with the work of organizing the supervision of the schools which would render such a collection of books a great convenience to those immediately connected with the Superintendent's Office, to the teachers, and to other persons interested in the public school system of the city. The liberality of the Board of Public Education has enabled me to carry out this purpose, and while the resources at command have been limited, the library has grown to such proportions as to render the printing of a catalogue a necessity.

The field of pedagogical literature is so extensive that it has not been possible to do more than make a selection of books adapted to the immediate needs of the department, while laying a broad foundation for future additions. What was required was a good working pedagogical library, and it is believed that the selection made furnishes the essentials for a pretty thorough study of the history and theory of education in the past, as well as ample materials for dealing with the living questions of our own time.

The paucity of German books will be noticed by every one having the slightest acquaintance with the richness of that language in pedagogical works. The general utility of the library must be urged as an

explanation of this deficiency. Besides, many of the writings of the great German educators are now accessible to the English reader, and the results of German thought and experience are speedily set before us in the form of translations and in original works upon the education of that country.

No apology, it is presumed, is needed for what may seem an undue preference for the French writers on education. The striking progress recently made in public education by our sister European republic has attracted marked attention all over the world. This advance has been accompanied by an awakening among her leading publicists and educators, that has borne fruit in a goodly array of works relating to education in both its theoretical and practical aspects, and possessing all those qualities so characteristic of the French mind in every department of literary effort. While the French, like all the rest of the world, have been borrowers in education from the Germans, it must be admitted that of late years they have been producing books of great pedagogical value. These are quite fully represented in this library, and it is believed, are not one of its least important features.

To increase the usefulness of the catalogue, a selection of references to the more recent and important articles in the leading periodicals has been added. Some of the best pedagogical literature of the day appears in this form ; and it was thought that the references to these sources of information, so easy of access in public libraries, would prove a convenience to persons consulting the catalogue for guidance or suggestions on special topics. Occasional bibliographical notes have been inserted for the same reason. I may be permitted to state with regard to both of these features that no attempt at completeness has been made. They might have been greatly extended ; but I have confined myself to making selections from my own note-books and the memoranda of my current reading. The object has been to call attention to such articles and books as are of special value, or are interesting on account of their bearing upon new and pressing educational questions.

The rules sanctioned by the best authorities have been followed in the arrangement and details of the catalogue. In nearly every case, the titles of the separate articles in volumes of a miscellaneous character have been given under the general title.

It will be understood that the books in History, Science, Language and Literature are merely an incidental feature of the library. The selection in United States History might lay claim to be at least representative of the subject; but outside of that, only such volumes have been added as are needed for convenient reference in conducting the supervision of a large system of schools.

The growing attention given by teachers to the literature and learning of their own profession is one of the most hopeful and encouraging signs of the times. Classes in Psychology, the History of Pedagogy and the Science of Education, are fast becoming a feature of teachers' reading circles, and Normal Schools are beginning to realize that something more than a few lessons in "methods" and two or three weeks' practice in a "training school," are required to prepare young men and women for the responsible duties of the school-room. The formation of pedagogical libraries in connection with the administration of city and state school systems will, I am sure, do much to promote this forward movement; and it is a source of great satisfaction to me that the Board of Public Education of Philadelphia is, I believe, the first to take this step.

It is only just that I should state that any faults that may be found in the catalogue are attributable to the limited time which I have been able to devote to it. All the work has been done in the odd minutes that could be spared from the performance of my official duties. It has been time very pleasantly spent, but I should have greatly preferred to make a more serious task of even the little that was undertaken.

I must acknowledge the valuable service rendered by my clerk, Miss Adele M. Smith, in reading the proofs. She has been indefatigable in her efforts to prevent the mistakes which are apt

to creep into the printing of so large a number of names and titles ; and it will be a disappointment if any serious error should be discovered.

43. **Pennypacker, Samuel W.** Christopher Dock, the pious school-master of the Skippack, and his works. *In his Historical and biographical sketches.* pp. 91. Philadelphia, 1883.

An interesting essay, containing an account of the principal writings of this almost unknown schoolmaster, to whom, it is believed, attention is called for the first time, by Mr. Pennypacker. The full title of Dock's principal work will be found in Hildeburn's *Issues of the press in Pennsylvania*, vol. II, No. 2,522. Of this work—"School management"—Mr. Pennypacker says: "It is the earliest written and published in America upon the subject of school teaching, and it is the only picture we have of the colonial country school. It is remarkable that at a time when the use of force was considered essential in the training of children, views so correct upon the subject of discipline should have been entertained. The only copy of the original edition I have ever seen is in the Cassel collection, recently secured by the Historical Society of Pennsylvania, and a ten years' search for one upon my own part has so far resulted in failure."

Mr. Pennypacker says further in a foot-note: "It is always treading on dangerous ground to say of a thing that it is the first of its kind, and especially is this true of books whose numbers are infinite. I know of no publication on the subject written earlier, and the bibliography of the American antiquarian society shows none. If there be any in New England or elsewhere to dispute priority with that of the Pennsylvania Dutchman, let it be produced."

The best work on the subject, but now (1886) entirely out of print. A new edition has been announced. Vols. x and xi of Bancroft's history (vol. vi of the revised edition) are devoted to the history of the formation of the constitution. Hildreth goes over the ground more rapidly in chapters xlii-xlviii, vol. iii. The outline in Schouler, vol. i, chap. i, is still briefer and is very readable and impartial. Elliot's Debates is the chief source of information on the formation of the constitution.
